

Staying Healthy: Recommendations for MEN

The Veterans Health Administration (VHA) aims to help you stay healthy. The table below lists the **preventive health services** (screening tests, medications, health counseling, and vaccines) that VHA recommends. Screening tests are used to look for health conditions before there are symptoms. These recommendations apply only to adult men of **average risk**. You are a man of average risk if you have **no personal or family history or symptoms** of the conditions listed below. If you are having symptoms of a condition, please talk with your provider.

Which preventive health services are recommended for average risk men in my age group?

Medium Gray:	Recommended
Light Gray:	Recommended for some men – talk with your provider
Dark Gray:	Not recommended (NR)
